The burden of proof will rest with the applicant to provide justification as to the need to import and stock the species, justify why currently approved species listed in this policy will not fill the need, and provide information that the requested species will have no significant ecological impact on native species or resources of the state. The stocking of any unlisted aquaculture species shall be conducted in a responsible manner that

excludes the possibility of escape from holding and culture units. Permit holders are required to construct a barrier that prevents escape of juvenile and adult species from their location and meet all biosecurity, containment, and health certificate requirements set forth by the AGFC Fisheries Division scientific review of the species. Additional biosecurity and containment requirements may be required as part of the terms of the permit based on scientific review of the species. In the event that unlisted aquatic organisms are released or escape from the stocked location, the permittee shall notify the AGFC Fisheries Division immediately. Additional screening for aquatic animal health pathogens maybe required for unlisted species due to country of origin, water source, or specific pathogens of concern and will be considered on a case by case basis.
