

RULES AND REGULATIONS FOR THE ARKANSAS BOLL WEEVIL ERADICATION PROGRAM

SUMMARY STATEMENT

This amendment to the Boll Weevil regulations effectively consolidates two sets of existing regulations into a single, state wide set of regulations that will provide guidance to the program for eradicating boll weevils in the state. It provides an alternate method of collecting production acreage information and prescribes a plan for generating assessment invoices when compared to the original regulations. The regulations guiding eradication activities in the Northeast Delta Zone of Arkansas are being included and combined with the regulations covering all other eradication zones in the state. This will simplify and increase the efficiency of the eradication program activities.
