Health education is a required component of screening services and includes anticipatory guidance. The developmental assessment, comprehensive, physical examination, and the visual, hearing or dental screening provide the initial opportunity for providing health education. Health education and counseling to parents (or guardians) and children are required. Health education and counseling are designed to assist in understanding what to expect in terms of the child's development and to provide information about the benefits of healthy lifestyles and practices, as well as accident and disease prevention. See Section 262.130 for procedure codes.

Health education can include but isn't limited to tobacco cessation counseling services to the parent/legal guardian of the child.
