

DRAFT Standard Statement – Physical and Logical Security

Title: Physical and Logical Security for Information Technology Resources Document Number: SS-70-008 Effective Date: xx/xx/2006 Published by: Office of Information Technology
--

1.0 Purpose

Information technology (IT) assets handled by computer systems must be adequately protected against unauthorized modification, disclosure, or destruction. Physical security is necessary to uphold access control and to limit information retrieval to a need to know basis.

2.0 Scope

This standard statement applies to all state agencies, institutions of higher education, boards and commissions.

3.0 Background

The Arkansas Information Systems Act of 1997 (Act 914, 1997) gives the Office of Information Technology the authority to define standards, policies and procedures to manage the information resources within the state. This is accomplished through work with a multi-agency working group known as the Shared Technical Architecture Team.

In addition, Act 1042 of 2001 states that the Executive Chief Information Officer oversees the development of information technology security policy for state agencies.

4.0 References

- 4.1 Data and System Security Classification Standard (SS-70-001):
<http://www.cio.arkansas.gov/techarch/indexes/standards.htm>
- 4.2 Act 914 of 1997: Authorized the Office of Information Technology (OIT) to develop statewide policies.
- 4.3 Act 1042 of 2001: Authorized the Executive CIO to develop security policy.
- 4.4 Arkansas General Records Retention Schedule.

5.0 Standard

5.1 Physical Security

- 5.1.0 The management of each covered entity is responsible for the implementation and maintenance of the physical security measures for their organizations.
 - 5.1.0.1 Physical security and access controls should address the areas containing system hardware, network wiring, backup media, and any other elements required for the system's operation.

5.1.0.2 Management should establish appropriate physical safeguards over devices that provide physical or logical access to sensitive data and systems (Data and System Security Classification standard Levels B, C, and D).

- 5.1.1** Master copies of critical software (Data and System Security Classification standard Levels 2 or 3) should be housed within a locked or otherwise restricted environment at all times allowing access to only those authorized by the covered entity.
- 5.1.2** All retired media must be processed so that no license-restricted software or sensitive data is retrievable.
- 5.1.3** Covered entities with systems classified by the Data and System Security Classification standard as Levels 2B, 2C, 2D, 3B, 3C and 3D shall:
 - 5.1.3.1** Periodically update data backups. Agencies subject to the Arkansas General Records Retention Schedule shall update according to that schedule.
 - 5.1.3.2** House media containing backup data required for restoration within a locked or otherwise restricted environment in a building apart from the systems housing the data.
- 5.1.4** Access to all backup media shall be restricted to only those authorized by the covered entity.
- 5.1.5** Covered entities shall secure all network layer components including but not limited to servers, hubs, routers and switches within a locked or otherwise restricted environment at all times allowing access to only those authorized by the covered entity. New or substantially modified facilities must incorporate lockable enclosures or closets for network layer components. Each state agency shall comply with the rules and guidelines promulgated under this subchapter upon the earlier of:
 - (1) July 1, 2007; or
 - (2) The line-item appropriation to the agency in question of funds to comply with this subchapter.
- 5.1.6** Workstations with access to data classified as Levels C or D by the Data and System Security Classification standard shall:
 - 5.1.6.1** Terminate application sessions after a specific amount of inactivity as determined by the agency owning the application.
 - 5.1.6.2** Lock screen after a maximum of 15 minutes of inactivity.
 - 5.1.6.3** Continuously manned workstations are exempt from this standard.
- 5.1.7** Reasonable measures must be taken to physically secure mobile computing and data storage devices from access by unauthorized users. Examples include, but are not limited to:
 - 5.1.7.1** Laptops
 - 5.1.7.2** Personal digital assistants (PDAs)
 - 5.1.7.3** Flash drives

5.2 Logical Security

5.2.0 Access Control and Auditing

- 5.2.0.1** Management should ensure each information asset (data and systems) has an appointed custodian, who could be a single person or group, who makes decisions about classification and access rights.
- 5.2.0.2** The logical access to and use of information technology computing resources should be restricted by the implementation of authentication and authorization mechanisms linking users and resources with access rules based on the individual's demonstrated need to view, add, change or delete data.

5.2.0.3 Agencies shall maintain logs of logon attempts to all agency servers defined in the Data and System Security Classification standard for all classifications except 1A. Logs should include user account name, the IP address, unsuccessful/successful attempts and time of occurrence. Covered entities must determine the appropriate length of time to retain such logs. Agencies subject to the Arkansas Records Retention Schedule shall keep logs according to that schedule.

5.2.0.4 Copied data sent outside an agency must have all sensitive data as defined in the Data and System Security Classification standard Levels C and D redacted or controlled under a nondisclosure agreement.

5.2.1 User Account Management

5.2.1.1 Management should establish procedures to ensure timely action relating to requesting, approving, establishing, issuing, suspending and closing of user accounts.

5.2.1.2 Management should have a control process to identify inactive users and deactivate their access rights.

5.2.2 Violation and Security Activity Reports

5.2.2.1 Information technology security administrators should ensure that significant violation and security activity is logged, reviewed, and appropriately reported and escalated to identify and resolve incidents involving unauthorized activity. Parties to which reports may be submitted could include agency management, agency IT personnel, the State Security Office, or law enforcement officials.

5.2.2.2 Known or suspected penetration of the covered entity's system security that attempts to compromise systems within local area networks shall be reported to the State Security Office, unless precluded by law enforcement, within one business day of the discovery of the incident.

5.2.3 Firewalls

5.2.3.1 Covered entities shall use firewall(s) that are appropriately configured to protect information technology resources.

6.0 Procedures

- 6.1** Agencies shall be able to demonstrate compliance. Covered entities are also subject to audit by the Arkansas Division of Legislative Audit for compliance with COBIT guidelines. Agencies may also be subject to state and federal law, rules and regulations that are more restrictive, such as the Health Insurance Portability and Accountability Act of 1996 (HIPAA).
- 6.2** Covered entities may report compromise attempts defined in 5.2.2.2 through a variety of means that may include calling, online reporting, or other methods of communication as defined by the State Security Office.
